### PROFESSIONAL EXPERIENCE

---

- 05/02/2022 - up to present **Penetration Tester**  
Spike Reply S.R.L. - Turin - ITALY  
My role is to find security vulnerabilities in a computer system and exploit them to perform attacks. The term "vulnerability" is to be taken in a broad sense: it is not necessarily a security breach making it possible to remotely take control of a machine, which is the ultimate flaw, but the term "vulnerability" can stand just for the disclosure of information by a system that can give indications to a hacker to develop its attack. Actually, I perform WAPTs (Web Application Penetration Tests) for an international customer belonging to the Financial Services industry.
